PROJECTS

GEDI | ○

- An intelligent document management system developed to streamline the handling of documents efficiently.
- The project is currently organized as a monorepo, providing open access for anyone to use freely.
- Built using a technology stack that includes React, React Native, Node.js, and Python. Additionally, it leverages Langchain for specific functionalities and incorporates state-of-the-art Language Model (LLM) for advanced natural language processing.

CV Manager | ○

- TThis web application was created to help recruiters and that they can facilitate and expedite the hiring of candidates for a job position.
- Currently a monorepo accessible for anyone to use freely.
- The app uses MERN Stack and Brain.js for machine learning.

Homebanking App Web | ○

- An entire home-banking app.
- Designed the frontend page and backend, database, while collaborating with teammates on the business logic. We also developed a CRUD for employees.
- Used technologies like HTML, CSS, Bootstrap, JavaScript, Django, and Django Rest Framework.
